Installing Farming Simulator
1. Insert the disc into the cd drive
2. Follow the installation's instructions. (Do note the harddrive that the game is installed it needs to match for all pieces)
3. Open the game and confirm that it runs

Installing vorpX

First of all note that vorpX requires a special key emailed to the user after installation
1. Buy vorpX
2. Find the email with the vorpX download instructions
3. Download and install
4. Send the name of the owner and the Request Code from the installation
   a. If the purchasing email is not the email used to send the name of the purchaser and email will be required
5. Add the key to the instillation

Installing the appropriate mods
1. Update Farming Simulator 2019
   a. Download from this link for windows 10 / 8
      i. https://www.farming-simulator.com/updates.php?lang=en&country=us
   b. Install the .exe file
2. Find the mods desired
   a. One of the mods we used can be found here
      i. https://github.com/Stephan-S/FS19_AutoDrive
3. Download the .zip file
4. Find the farming simulator folder (this is usually found in the documents folder)
   a. Look for the mods folder and place the .zip file inside
5. Open farming simulator and go to the mods menu
6. Check under the ```installed``` folder and click install

When you load a game ensure your mod is selected with a check mark.
